

Team Name: sdmay24-19

Team Members: Ayden Albertsen

Report Period: Oct 23-Nov 5

Summary of Progress in this Period

During this period, we continued to work on finalizing our design document. We also started working on a UI/UX prototype for our application. We met with our clients and got a description of the algorithms and parameters that we are going to implement. We also outlined a testing plan and made decisions on the tools that we plan to use during testing. Additionally, we began working on the development of a job broker system for algorithm jobs in the backend. We are using a python library called Celery to manage API calls through Flask.

Pending Issues

None

Plans for Upcoming Reporting Period

We are looking to finalize our design document and create our final presentation. As we near the end of the semester we are making sure that we have a cohesive document that complexly describes our design and plan.
